

BEARINGS FOR THE STEEL INDUSTRY

SUBSCRIBE TO NSK NEWSLETTER

As one of the world's leading manufacturers of rolling bearings, linear technology components and steering systems, we can be found on almost every continent – with production facilities, sales offices and technology centres – because our customers appreciate short decision-making channels, prompt deliveries and local service.

The NSK company

NSK commenced operations as the first Japanese manufacturer of rolling bearings back in 1916. Ever since, we have been continuously expanding and improving not only our product portfolio but also our range of services for various industrial sectors. In this context, we develop technologies in the fields of rolling bearings, linear systems, components for the automotive industry and mechatronic systems. Our research and production facilities in Europe, Americas and Asia are linked together in a global technology

network. Here we concentrate not only on the development of new technologies, but also on the continuous optimisation of quality – at every process stage.

Among other things, our research activities include product design, simulation applications using a variety of analytical systems and the development of different steels and lubricants for rolling bearings.

Partnership based on trust – and trust based on quality

Total Quality by NSK: The synergies of our global network of NSK Technology Centres.
Just one example of how we meet our requirements for high quality.

NSK is one of the leading companies with a long tradition in patent applications for machine parts. In our worldwide research centres, we not only concentrate on the development of new technologies, but also on the continual

improvement of quality based on the integrated technology platform of tribology, material technology, analysis and mechatronics.

Robust, wear-resistant and durable – NSK's rolling bearings for the iron and steel industry

It's a tough life in the iron and steel industry: variations in temperature, high levels of contamination, belt speeds of more than 2000 metres a minute, rocking motions and impacts. NSK rolling bearings take all of this in their stride; from the preparation of the raw material, through the smelting process, right up to the final rolled product.

We offer bearings that have been specially developed for all the relevant conditions encountered throughout the entire process. That's why, for example, we have developed sealed spherical roller bearings for continuous casting plants that prevent the ingress of contamination and offer optimal service life. Our taper roller bearings and cylindrical roller bearings with self aligning outer ring are also perfectly suited for continuous casting plants.

Then there are our taper roller bearings which are available in various special materials for rolling mills such as Water-TF and Super-TF together with our Sealed-Clean technology. Beyond that, we offer various bearings for sinter machines, LD converters, chain conveyors, levellers and many more.

Reducing downtime through increased reliability

The variants are many, but all our products have one thing in common: they are reliable, wear-resistant and durable - thereby ensuring profitable production.

Innovation made by NSK – Sealed-Clean

In 1980, NSK was the first company in the world to bring the sealed four row tapered rolling bearing (Sealed Clean) on to the market. Since then, we have continually improved the Sealed-Clean bearing. In this way, we have been able to measurably increase its load-carrying capacity through newly-developed internal construction and a new sealing system. Even grease consumption has been drastically reduced; which not only leads to lower costs but also makes it more environmentally friendly. Sealed-Clean bearings can be supplied in case-hardened and through-hardened steel. NSK's various steel specifications are particularly wear and shock resistant due to our special heat and surface treatment technology.

Sealed-Clean bearings for extreme conditions

The best combination for new developments: research and practical experience

NSK rolling bearings for the iron and steel industry are the result of intense research and development, as well as a close working relationship with our clients. As a result of the demands of practical experience, we conduct a continuous improvement programme for our products, with as much

regard to construction as materials and lubrication. In order to guarantee the highest standards of quality and reliability under the harshest of conditions, all NSK products undergo the most stringent testing on our test rigs

NSK products for the entire iron and steel industry process

Rolling bearings for iron and steel mills have to withstand varied and extreme operating conditions, amongst which high temperatures, high or low rotational speeds, as well as environments that are contaminated with water or dirt. We offer a whole range of products for all mill processes; products that deliver reliable and continuous operation under all conditions.

Bearings for Sintering Equipment

Sealed-Clean Bearings for Pallet Wheels

Sealed-Clean Bearings for Inboard Rollers

1. Operating conditions

- › High temperature
- › Heavy loads
- › Low speed
- › Scale (sintered particles)

2. Problems

Problem 1

Premature failure of bearings for pallet wheels and bearings for inboard rollers (plain bearings)

Entry of sintered particles into the bearing

Thermal degradation of grease

Poor lubrication

- › Premature wear and flaking
- › Seizure damage

High bearing usage cost

Unexpected failure

Problem 2

Contamination around the equipment, high maintenance costs

Frequent greasing

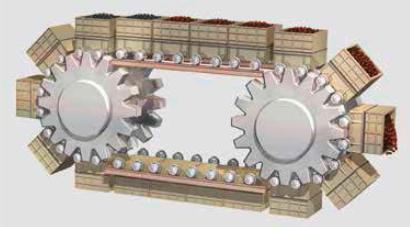

High operational cost for grease

Leakage of the grease into the surroundings

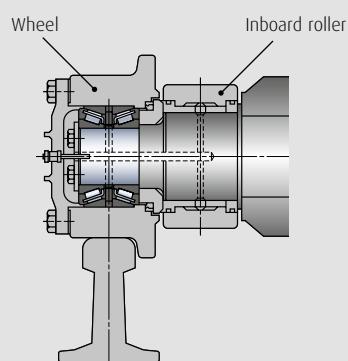

Contamination around the equipment, high usage cost

Sintering equipment

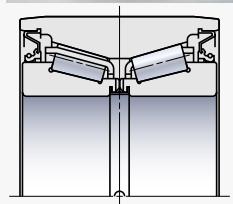

Conventional Structure

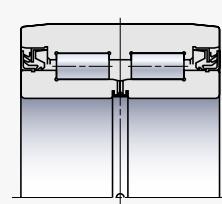

3. Countermeasures

Design measures

Sealed-Clean Bearings for Pallet Wheels – AR Series*

- › Optimum crowning of the roller raceway surface enabling resistance to unbalanced load of wheels
- › High sealing performance (featuring a special contact seal)
- › Packing of grease with excellent heat and pressure resistance
- › Easier handling (one-piece design with fastening ring adopted for the inner ring)

Sealed-Clean Bearings for Inboard Rollers – 2J Series*

- › Higher load capacity (by outer ring thickness design with high strength and full-complement roller type)
- › Improvement of axial load capacity
- › High sealing performance (featuring a special contact seal)
- › Packing of grease with excellent heat and pressure resistance
- › Easier handling (one-piece design with fastening ring adopted for the inner ring)

4. Benefits

- › Stable machinery operation through higher reliability and longer operating life
- › Cleaner areas adjacent to equipment
- › Reduced maintenance costs

Durability Performance of Bearings in Field Test

- › Conventional structure = 1
- › Newly developed structure = Ø 2,5, max. 3

Previous	1
New	2.5 on average < 3

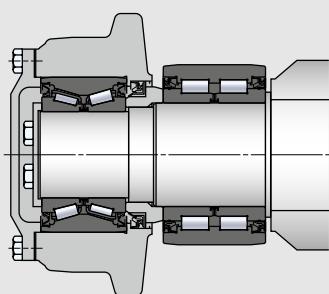

Estimated effect of maintenance cost reduction

Previous	Maintenance cost	
New	Maintenance cost	Cost saving

The maintenance cost includes the replacement costs for bearings, seals and grease and the operational costs associated with the bearing replacement and greasing.

If the bearing life extends 2.5 times on average as a result of using the newly developed structure for bearings for pallet wheels/inboard rollers for pallet dollies, the total maintenance cost reduction effect is estimated to be 25% to 35%.

Newly developed structure

* Bearing tables see page 30

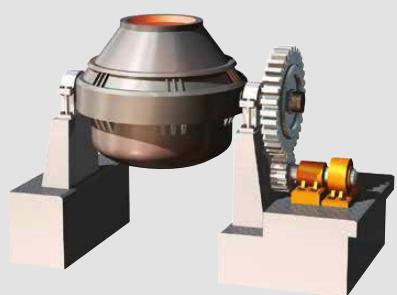

Bearings for BOFs and Converters

Ultra-Large Split Bearings for BOFs and Converter Trunnions

1. Operating conditions

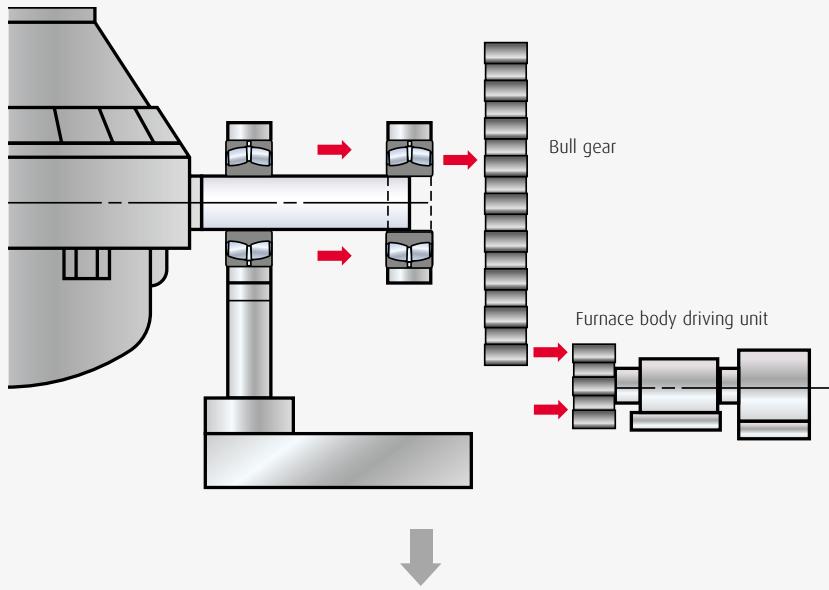

- › High temperature
- › Heavy loads
- › Ultra-low speed and Oscillating

BOFs and converters

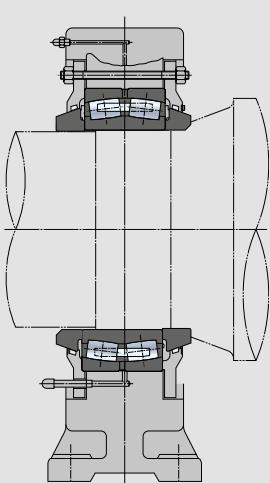

2. Typical Problems

Inboard bearings cannot be replaced without removing the bull gear

Bearing replacement work is time-consuming,
requiring high maintenance costs

Conventional structure

In addition, sudden bearing replacement due to an unexpected failure
causes large production loss in the subsequent processes

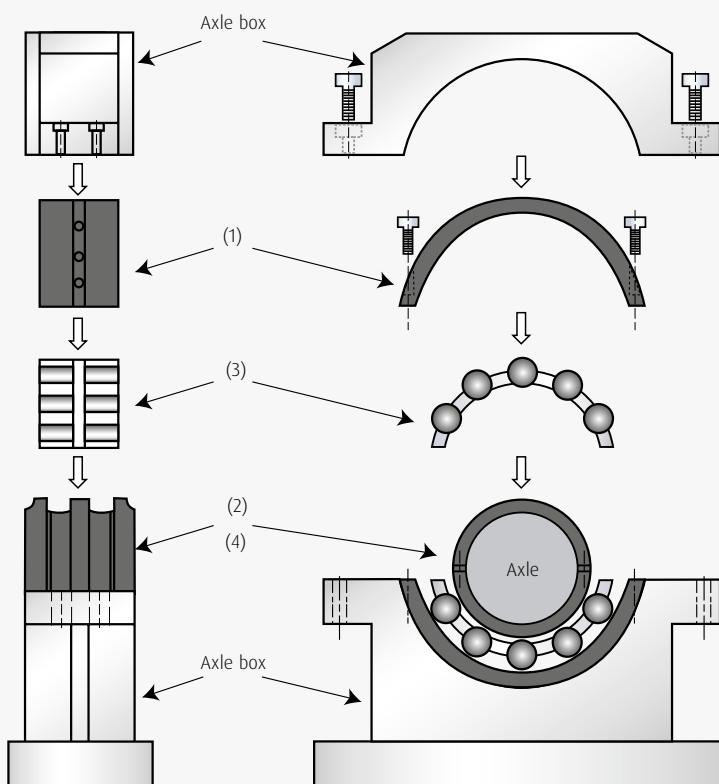

3. Countermeasures

Ultra-Large Split Bearings for BOFs and Converter Trunnions*

- › A split design of ultra-large spherical roller bearings:
 - (1) outer ring
 - (2) inner ring
 - (3) roller and cage assembly and
 - (4) fastening ring
- › Seal sliding surface integrated by a fastening ring

Design measures

4. Benefits

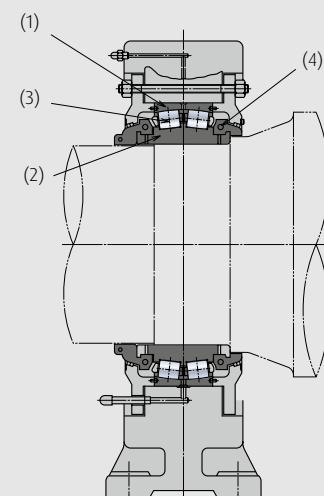

- › Bearings can be replaced without removing the bull gear, thus reducing maintenance costs
- › Reduction of maintenance costs by shortening length of time for bearing replacement work
- › Reduction of production loss, which would affect subsequent processes

Comparison of time required for bearing replacement work in field test

Previous	1
New	0.65

The bearing replacement period represents the actual result for bearings with bore diameter of 1200 mm to 1400 mm. In the case above, the bearing with the newly developed structure reduced the time needed for bearing replacement work by approximately 35%, and thereby significantly reduced maintenance cost.

Newly developed structure

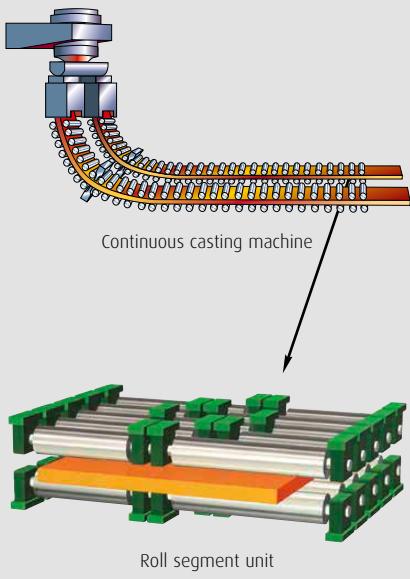

* Bearing tables see page 31

Bearings for Continuous Casting Machines

Bearings for Guide Rolls

1. Operating conditions

- › Heat
- › Heavy loads
- › Water vapor (Water)
- › Ultra-low speed
- › Scale
- › Deflection of a roll

2. Typical problems

Differential sliding specific to spherical roller bearings

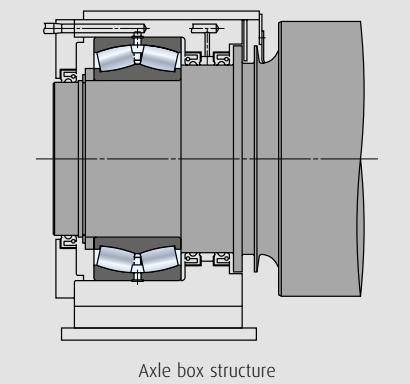

- › Uneven wear

- › Flaking
- › Crack

Conventional structure

- › Expansion of roll gaps (failure of rolls)
- › Defective-quality products
- › Unexpected production line failure
- › High bearing usage cost

3. Countermeasures

Material measures

SWR Bearings (Spherical Roller Bearings) – SWR Series*

- › Improved wear resistance – three times compared to AISI 52100 bearing steel
- › Improved flaking life property – five times compared to AISI 52100 bearing steel
- › Improved toughness of material core (prevention of crack damage) – five times compared to AISI 52100 bearing steel

Design measures

Cylindrical Roller Bearings with Aligning Rings (for free end) – RUB Series*

- › Prevention of wear due to no differential sliding of spherical roller bearing and additional function of self-aligning (see page 18 for further explanation)
- › Smooth relief of roll expansion
- › Type: Easy handling cage type
Full-complement type with higher load capacity

Tapered Roller Bearings with Aligning Rings (for fixed end) – AR Series*

- › Prevention of wear due to no differential sliding of spherical roller bearing and additional function of self-aligning (see page 18 for further explanation)
- › High thrust load capacity

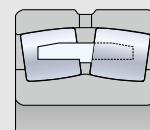

Split Cylindrical Roller Bearings (for segmented rolls) – RCPH/PHR Series*

- › Prevention of wear due to no differential sliding of spherical roller bearing. (see page 18 for further explanation)
- › Full-complement, higher load capacity design
- › Multi-functional seal and high rigidity plummer block unit

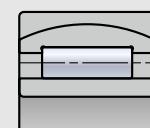

4. Benefits

- › Improved bearing durability prevents unexpected accidents
- › Roll segment is replaced less frequently, thus reducing maintenance costs

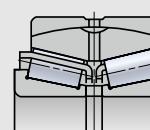

Newly developed structure

* Bearing tables see page 32-33 (SWR Series), page 34 (RUB Series), page 35 (AR Series), page 36-37 (RCPH/PHR)

Recommended Bearing Arrangements

NSK has prepared the following arrangements for bearings used in guide rolls of continuous casting machines with recently developed SWR Bearings and tapered roller bearings with aligning rings additionally.

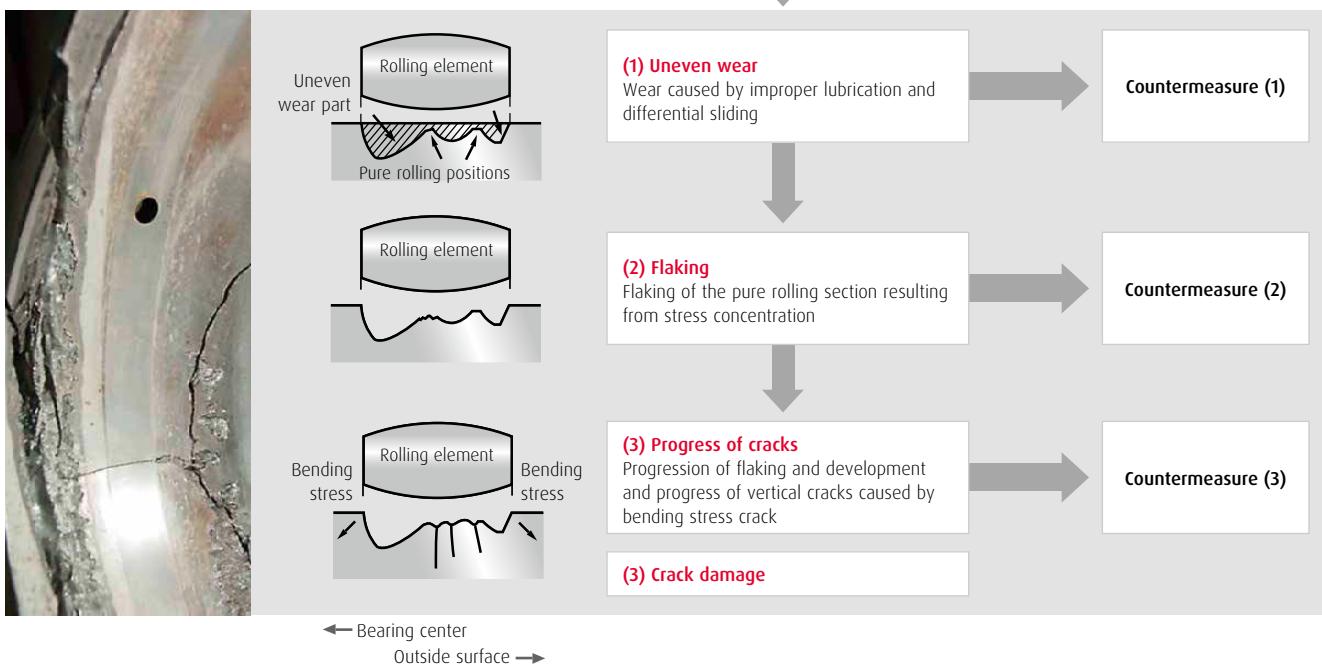

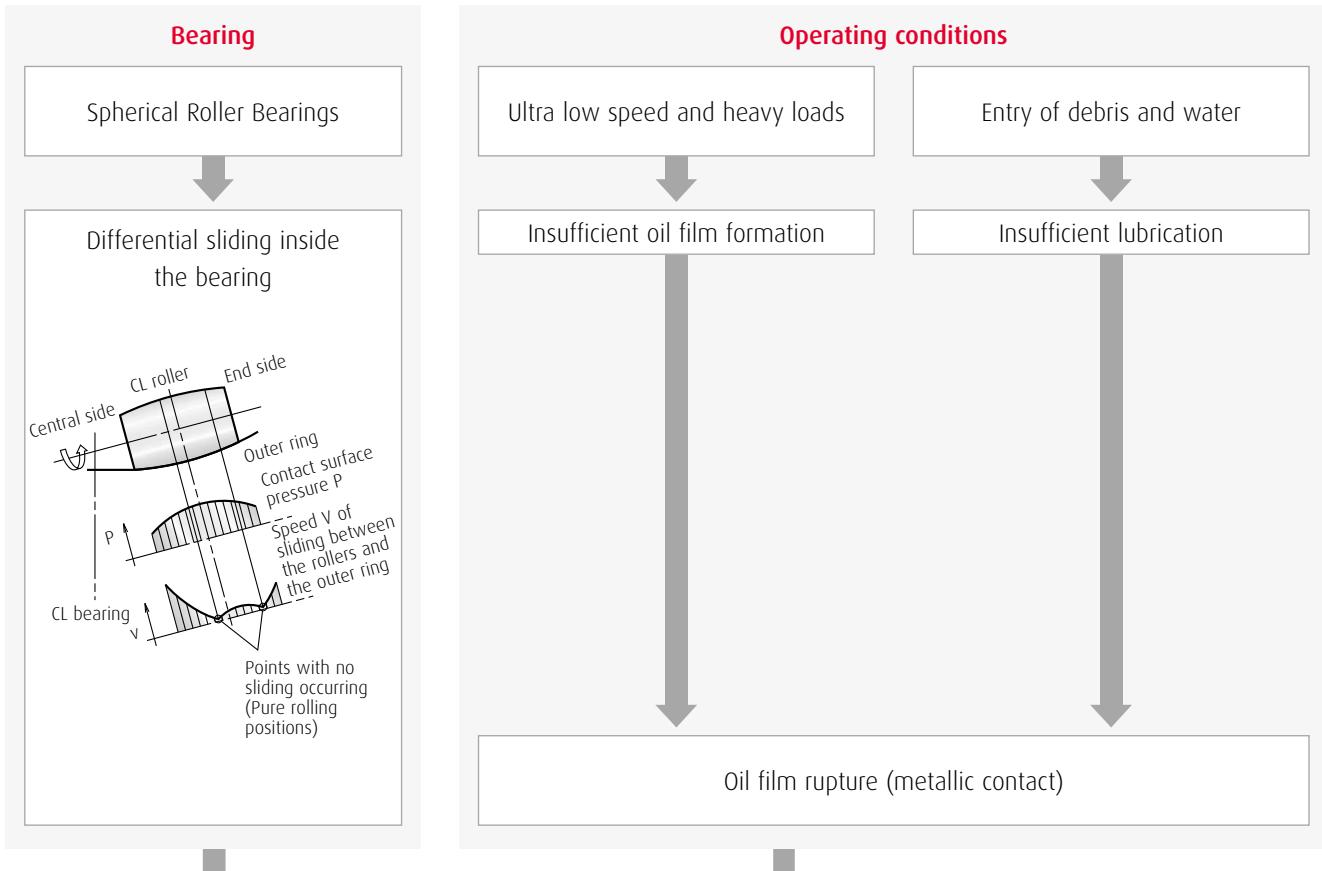

Bearing arrangement for segmented drive rolls

Identification of the failure mechanism

Failure mechanism of spherical roller bearings for continuous casting machines

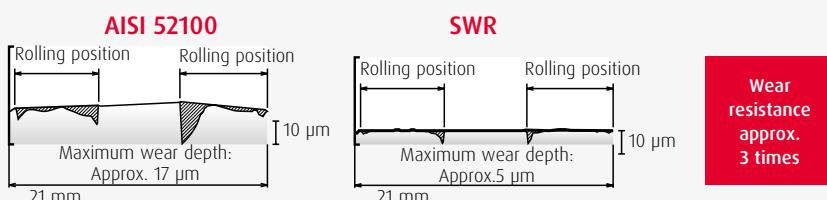

Development of SWR Bearings

Basic performance

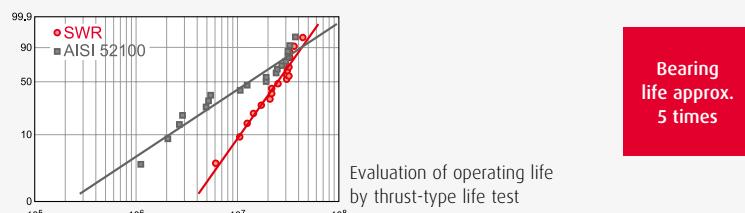

Profile of wear on the outer ring raceway surface of Spherical Roller Bearings

Countermeasure (1): Wear resistance

Evaluation of an endurance test using 22210CD bearings

Countermeasure (2): Improved flaking life (inhibition of flaking)

Bearing life approx.
5 times

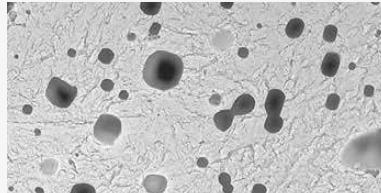

Evaluation of operating life by thrust-type life test

Development of wear-resistant materials

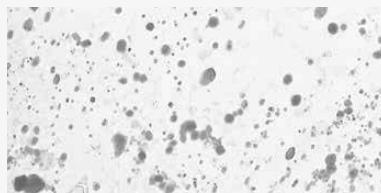

- Selection of steel chemical composition
- Applied special heat treatment technology
- Controlled optimum level for retained austenite

Microstructure:

Result P-extraction replica work using transmission electron microscopy (TEM)

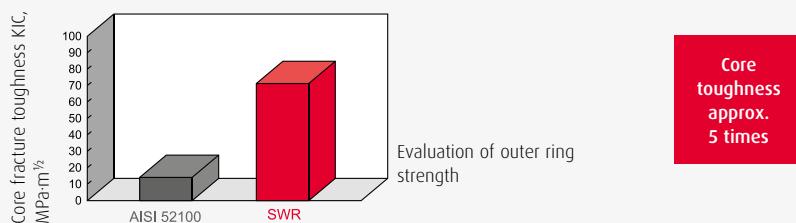

AISI 52100

SWR

Countermeasure (3): Improved outer ring strength

Core toughness approx.
5 times

Evaluation of outer ring strength

Field endurance evaluation

Longer bearing life results in extended segment replacement cycles

SWR Bearings allow users, who have been forced to replace segments at frequent cycles due to the bearing life of standard spherical roller bearings, to attain maximum effect in reducing maintenance, by decreasing unexpected accidents and using rolls to the full extent of their operating life.

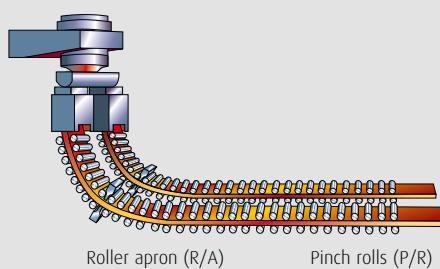

Standard Spherical Roller Bearings CASE 1 and 2*

Ø Average segment replacement cycles: 1

SWR Bearings CASE 1 and 2*

Ø Average segment replacement cycles: 1.6

Maximum: 2

* see case 1 and 2 on pages 16-17

Development of tapered roller bearings and cylindrical roller bearings with aligning rings

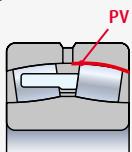

Development of new type bearings

Comparison of PV value properties affecting the wear within the bearing

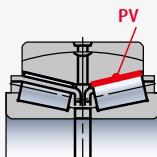

Surface pressure (P), Sliding (V), Wear property parameter: PV (PxV)

PV value between the outer ring raceway surface and roller raceway surface

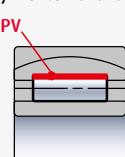

(1) Spherical Roller Bearing

(2) Tapered roller bearing with aligning ring

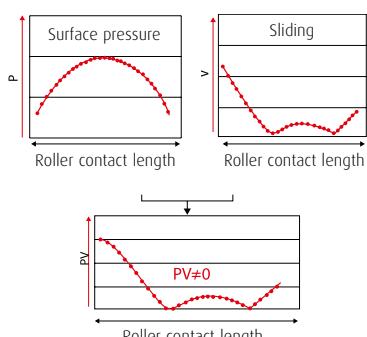

(3) Cylindrical roller bearing with aligning ring

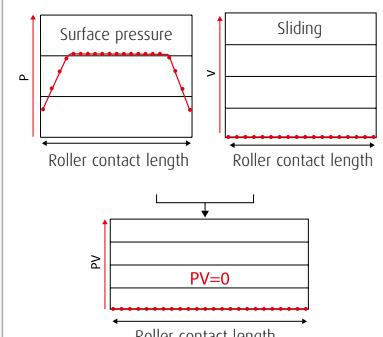

PV value properties of

Spherical Roller Bearing (1)

Tapered Roller Bearing (2)
and Cylindrical Roller Bearing (3)

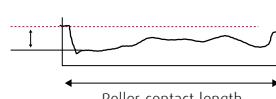

Field endurance evaluation

Wear evaluation

Example of inspection of an abrasion level on the outer ring raceway surface

Standard Spherical Roller Bearing

Amount of wear:
14 µm

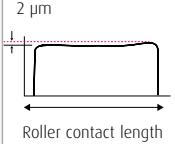

Service period: 12 months

Outer ring raceway surface abrasion was significant:
large uneven wear

Tapered Roller Bearing with aligning ring (one-side)

Amount of wear:
2 µm

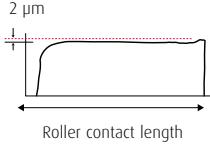

Service period: 21 months

Wear on the outer ring raceway surface was
infinitesimal

Cylindrical Roller Bearing with aligning ring

Amount of wear:
2 µm

User Benefit

Estimated effect of maintenance cost reduction

Maintenance cost includes expenses for repairing of rolls, replacement of bearings, seal and fittings, as well as labor cost required on every segment replacement.

Standard bearings

Example: 24 months

Frequency of segment maintenance	First	Second	Third
Maintenance cost	Maintenance cost	Maintenance cost	Maintenance cost
Segment replacement cycles	1 (8 months)	1 (8 months)	1 (8 months)

SWR Bearings

Example: 26 months

Frequency of segment maintenance	First		Second	
	Maintenance cost	Reduced cost	Maintenance cost	Reduced cost
Segment replacement cycles	1.6 (13 months)		1.6 (13 months)	

If SWR Bearings are used on 1-8 segments out of 15 segments of a 2-strand continuous casting machine, then segment life is extended on average 1.6 times. The estimated reduction effect is 20%-30% of total maintenance cost.

Bearings for Rolling Mills

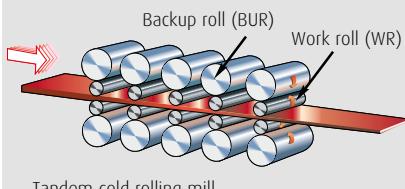

Four-Row Tapered Roller Bearings for Work Rolls

1. Operating conditions

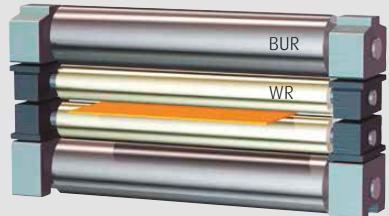

- › High speed/Low speed
- › Heavy loads
- › Vibration and Impact
- › High temperature
- › Scale
- › Water infiltration

Major target mills:

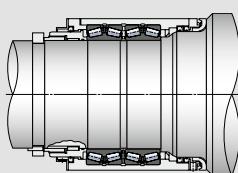

- › Hot strip mills
- › Skin pass mills
- › Cold rolling mills
- › Temper rolling mills

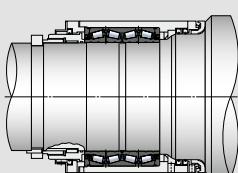

Tandem cold rolling mill

Conventional structure

(1) Open type four-row tapered roller bearing

(2) Sealed four-row tapered roller bearing

2. Typical problems

(1) Open type four-row tapered roller bearings

Large grease consumption and high maintenance costs

Premature failure due to poor lubrication

(2) Sealed four-row tapered roller bearings

Operating conditions, including loading, debris and water infiltration become severe

Flaking

Seizure

High bearing usage cost
Unexpected production line failure

3. Countermeasures

Material measures

Water-TF Bearings – WTF Series*

- › Adoption of super-clean steel with optimum alloy balance controls development and progress of cracks at early flaking stage caused by water infiltration
- › Control of the retained austenite reduces concentration of stress resulting from dents caused by infiltration of debris

Water-TF Bearings are a special purpose bearing series in the same design as the standard KVS types (see below)

Optimum construction

Extra-Capacity Sealed-Clean

Four-Row Tapered Roller Bearings – KVS Series**

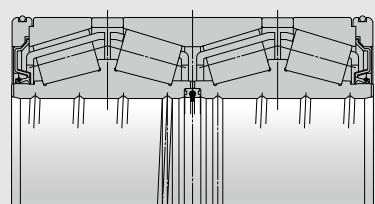

- › Higher load capacity: increased by 15%-35% compared to conventional sealed bearings
- › Super-TF steel: resistant to foreign contamination, used as standard
- › Controlled negative pressure during rolling to prevent water infiltration
- › Improved sealing through usage of heat- and water-resistant sealing materials
- › Easier handling of seals

4. Benefits

- › Higher reliability and longer operating life prevent unexpected accidents
- › Bearing seal requires less cleaning of work environment and reduces grease consumption
- › Reduced maintenance costs

User Benefit page 28 – 29

Newly developed structure

Extra-Capacity Sealed-Clean
Four-Row Tapered Roller Bearings – KVS Series

** Bearing tables see page 40-41

Bearings for Rolling Mills

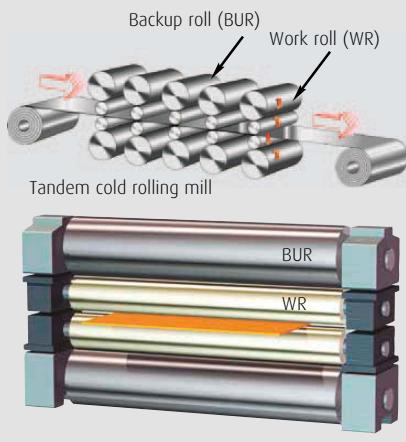

Four-Row Cylindrical Roller Bearings for Backup Rolls

1. Operating conditions

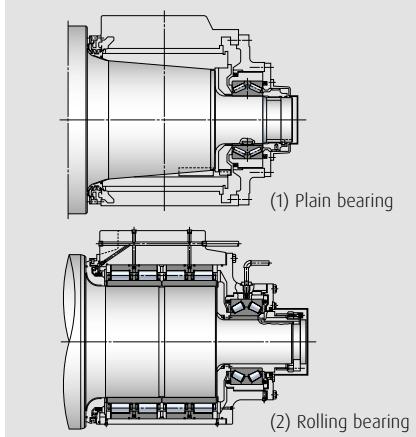

- › Vibration and Impact
- › Heavy loads
- › High temperature
- › High speed/Low speed

Major target mills:

- › Plate mills
- › Skin pass mills
- › Hot strip mills
- › Temper rolling mills
- › Cold rolling mills

Conventional structure

2. Typical problems

(1) Plain bearings

Oil film change

Problem of plate making precision

(2) Rolling bearings (Four-Row Cylindrical Roller Bearings)

Lubrication conditions and rolling load become more harsh

Insufficient EHL oil film formation

Super-heavy loads

Flaking

Cracks on rollers

High bearing usage cost

Unexpected production line failure

3. Countermeasures

Design measures

Super-TF Four-Row Cylindrical Roller Bearings – STF-RV Series*

- › Longer life Super-TF steel, resulting in longer durability, even under boundary-lubrication with insufficient EHL oil film formation
- › Higher load capacity by using pin type cage
- › Higher rotational accuracy

Bearing usage cost
reduced by 50%

Super-TF Four-Row Cylindrical Roller Bearings – STF-RV stud type**

- › Target: Bearings for backup rolls of plate mills
- › Adoption of solid type rollers associated with the development of a stud-type cage
- › Higher load capacity
- › Adoption of long-life Super-TF steel
- › Higher rotational accuracy

Elimination of unexpected
accidents caused by
cracks on rollers

4. Benefits

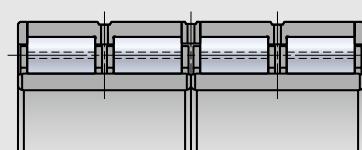

- › Higher reliability and longer operating life prevent unexpected accidents
- › Reduced maintenance costs
- › Smoother rolling of bearings for backup rolls improves plate making precision

Comparison of actual life extension in field test

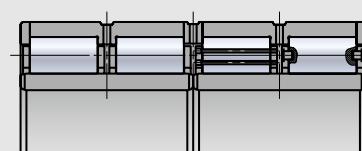

- › Conventional steel = 1
- › Super TF steel = 2

Previous	1
New	2

Newly developed structure

STF-RV-Series

STF-RV (stud type)

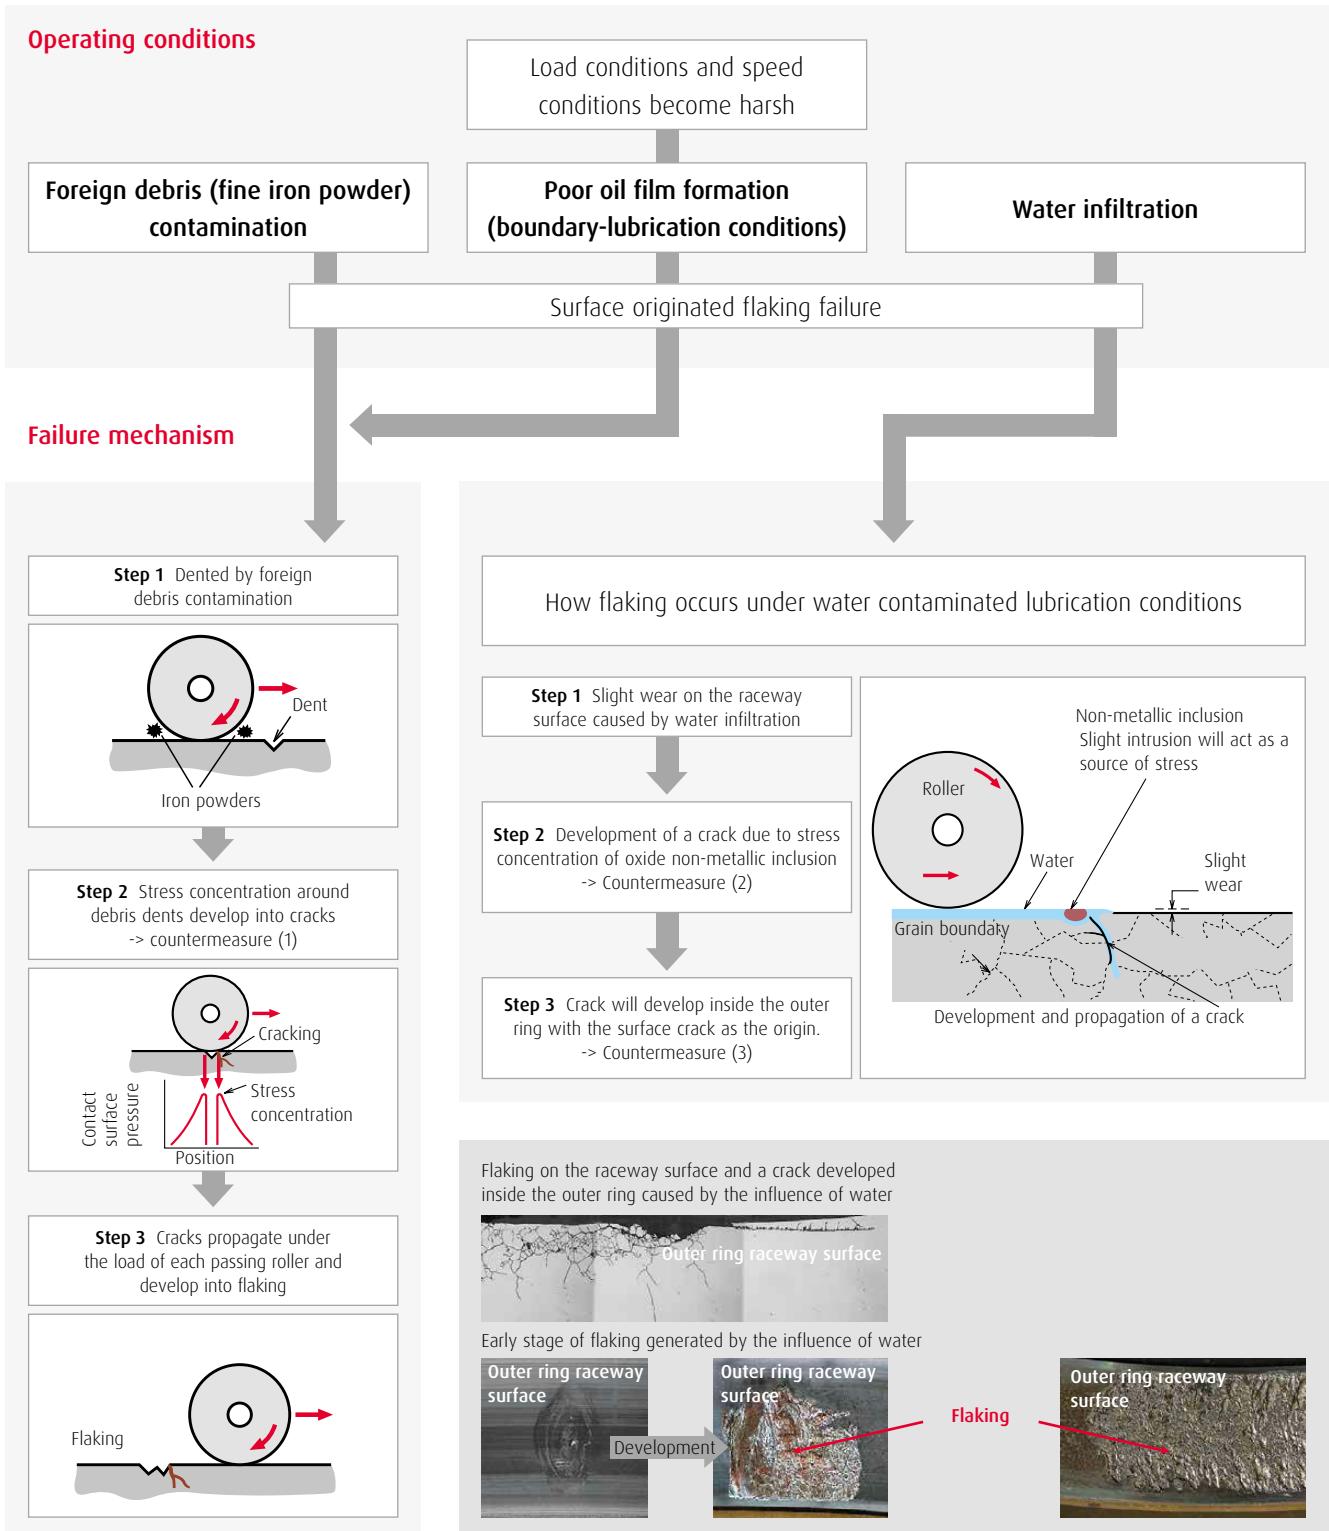

* Bearing tables see page 42

** Bearing tables see page 43

Identification of the failure mechanism

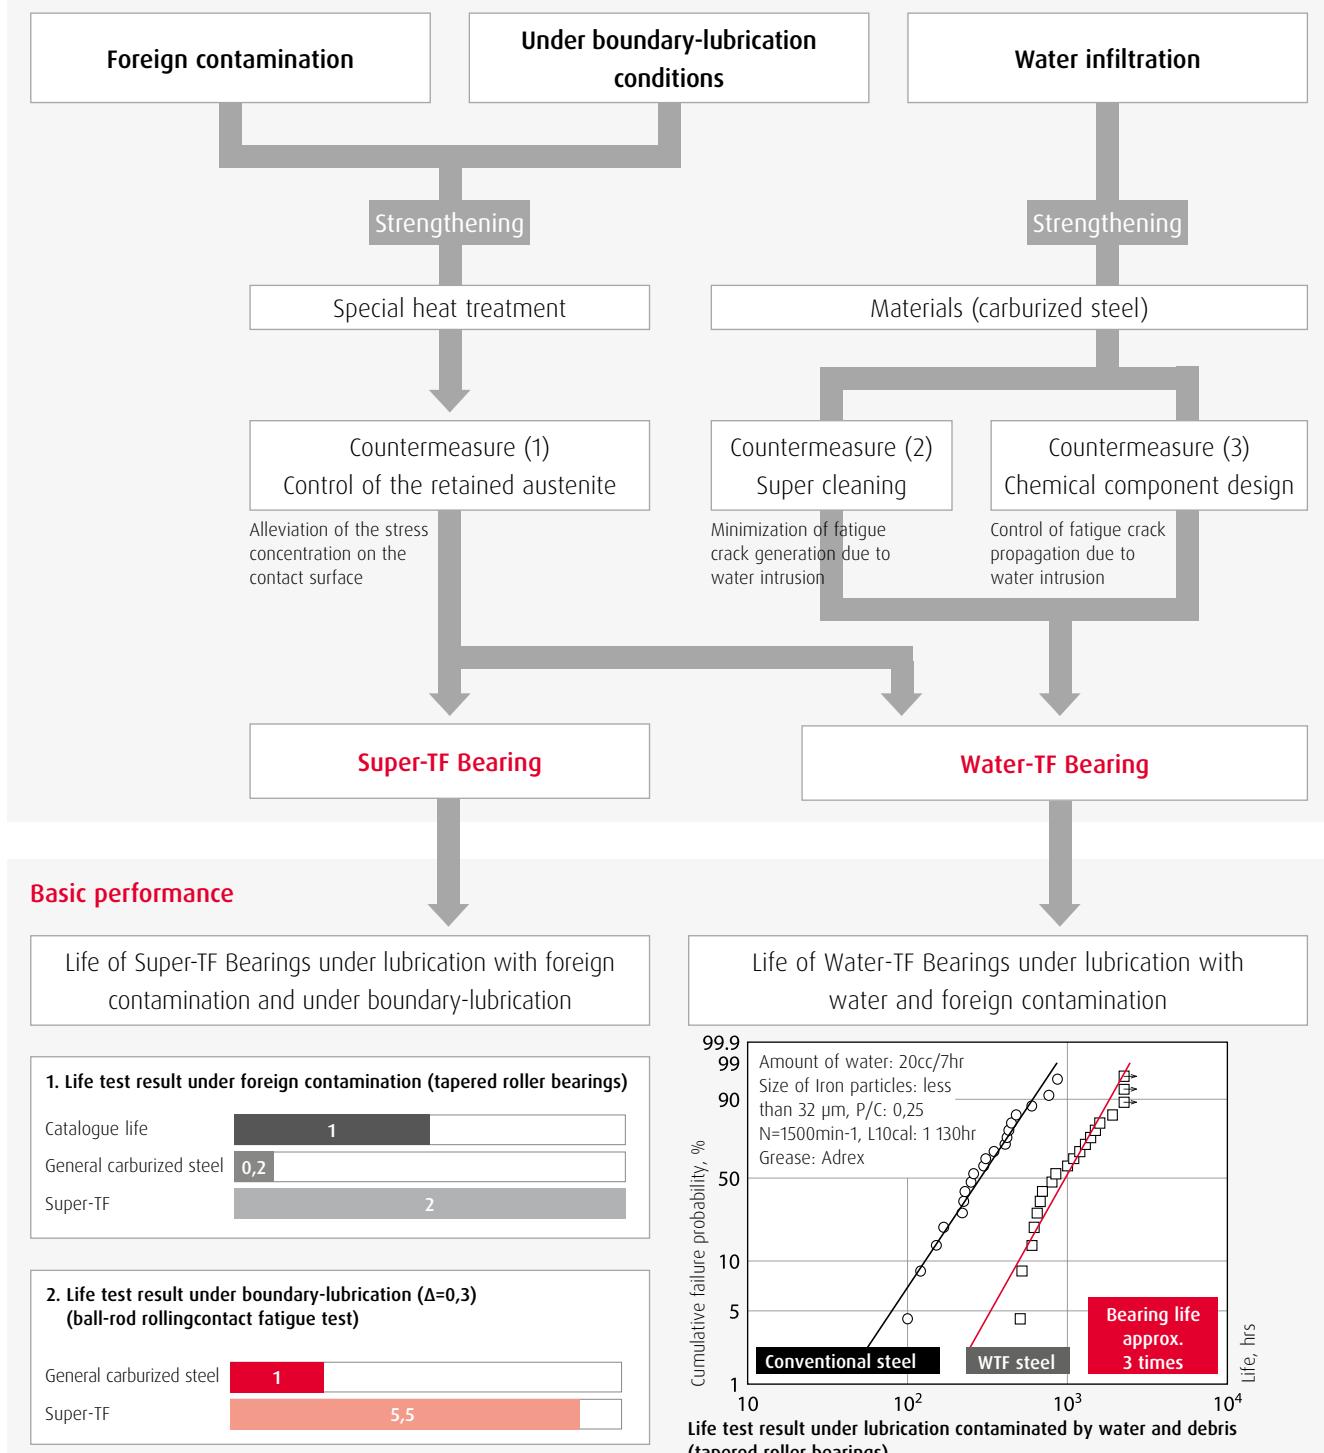

Failure mechanism of the four-row tapered roller bearings for work rolls for rolling mills

Development of Super-TF Bearing and Water-TF Bearing

Enhances reliability and reduces maintenance cost of rolling mills

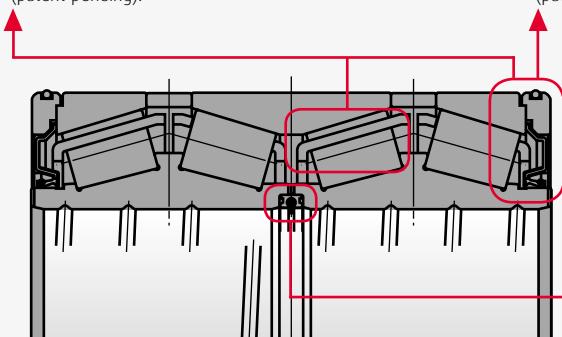

Development of Extra-Capacity Sealed-Clean Four-Row Tapered Roller Bearings (KVS Series)

Design measures

High-load capacity design

New internal structure specifications, combined with a new type of seal, increase bearing capacity (patent pending).

New seal and holder

The new seal and its holder make handling easier and minimize seal damage (patent pending).

New bore seal

The new bore seal prevents negative pressure that causes water entry and provides for easier mounting and dismounting (patents pending).

KVS Series

› Basic load rating (C_0):

15-35% increase

› Estimated life (L_{10}):

1.6 to 2.7 times of estimated life extension

› Performance of the bearing seal (Control of negative pressure inside the bearing):

Negative pressure and water infiltration were reduced to less than 1/3

Field durability performance

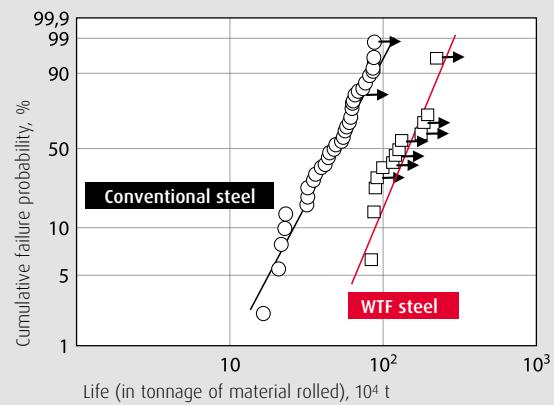

- › Target equipment: tandem cold rolling mills (4-high)
- › Segment example: work rolls
- › Bearing type: sealed four-row tapered roller bearings
- › Bearing No.: WTF343KVS4551

Average life ratios of bearings for work rolls

Water-TF Bearings demonstrated on average a three times longer life span for users who previously had been faced with bearings with short life spans due to water infiltration.

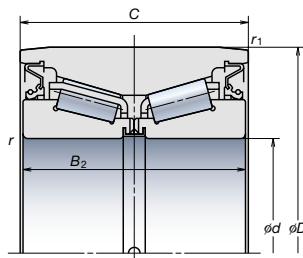

User Benefit

Estimated effect of maintenance cost reduction

Bearing specifications	Grease	Bearing usage cost and seal repair cost	Maintenance work cost for bearings
Open type bearings (without seal)			
Maintenance cycle: 3 months			
Conventional sealed bearings	90% reduction		
Maintenance cycle: 6 months			50% reduction
Water-TF Bearings Maintenance cycle: 6 months	90% reduction	 50% reduction	 50% reduction

Overall cost benefit in a five-stand cold rolling mill (four-high rolling) using Water-TF Bearings is roughly 30% to 35% compared to open-type bearings and maintenance cost benefit is roughly 25% to 30% if compared to conventional sealed bearings. Cost benefit is the sum of costs related to grease, bearing usage, seal repair, and maintenance costs.

Dynamic Equivalent Load $P = X F_r + Y F_a$			
$F_a / F_r \leq e$		$F_a / F_r > e$	
X	Y	X	Y
1	Y_3	0,67	Y_2

Static Equivalent Load
 $P_0 = F_r + Y_0 F_a$
Where $Y_0 = Y_3$
The values of e, Y_2 and Y_3 are given in the table.

Remarks (*) Bearings marked * are inch designs.

Water-TF Bearings are a special purpose bearing series in the same design as the standard Extra-Capacity Sealed-Clean Four-Row Tapered Roller Bearings. Other bearings are available. Please contact NSK for additional information.
